

PART A-PLAN

Micro-Project Proposal

Title of the Micro-Project: File and Folder Security

1.0: Brief Introduction:

A batch file is a script file in DOS, OS/2 and Microsoft Windows. It consists of a series of commands to be executed by the command-line interpreter, stored in a plain text file. A batch file may contain any command the interpreter accepts interactively and use constructs that enable conditional branching and looping within the batch file, such as IF, FOR, and GOTO labels. The term "batch" is from batch processing, meaning "non-interactive execution", though a batch file may not process a batch of multiple data.

2.0: Aim of the Micro-Project:

File management is the process of administering a system that correctly handles digital data. Therefore, an effective file management system improves the overall function of a business workflow. It also organizes important data and provides a searchable database for quick retrieval.

3.0 : Course outcomes:

- Apply user identification and authentication methods.
